Week 3 – Analytics Dashboard Project

London Success Academy Joint Internship Programme
Data-SPARK Mentorship – Venkat Potamsetti

Week 3 Scenario

Company: NovaCart E-Commerce

NovaCart is an online retail analytics company helping small businesses understand their sales performance.

The company collects large amounts of e-commerce transaction data but currently lacks clear dashboards for decision making.

Your team has been hired to build a simple analytics dashboard for the leadership team.

The dashboard will help answer questions like:

- Which sellers perform best
- How taxes affect pricing
- Regional sales differences
- Which sellers need improvement

Dataset Description

The dataset contains e-commerce sales statistics. Key variables include:

Column	Description
Sale	Sales per capita
por_OS	Proportion of other sellers
avg_no_it	Average items per sale
TAX	Tax per 10,000
Median_s	Median value of seller business

These variables allow analysis of seller performance and market behaviour.

Week 3 Learning Objectives

- Transform datasets for analytics
- Perform exploratory analysis
- Create dashboards
- Present business insights

Week 3 Tasks

Task 1 – Explore Dataset

- Distribution of sales
- Relationship between tax and revenue
- Seller performance categories

Task 2 – Create Dashboard

Students can use:

- Power BI
- Tableau
- Python (Streamlit / Plotly)
- Excel dashboards

Dashboard should include:

- Sales Overview
- Seller Performance
- Regional Comparison
- Tax Impact Analysis

Task 3 – Visualisations

- Bar chart – seller sales comparison
- Scatter plot – tax vs revenue
- Histogram – sales distribution
- KPI cards – total sales and median business value

Week 3 Presentation

- Dashboard walkthrough
- Key insights
- Business recommendations

Example insight: "Regions with lower tax rates show significantly higher seller activity."

Week 3 Deliverables

- Dashboard screenshots
- Presentation slides
- Summary report (1 page)

Final Outcome of Internship

- Cloud data pipelines
- Data workflow orchestration
- Analytics dashboard creation
- Business storytelling with data
